

QSR's ConnectSmart Hostess Maximizes Every Guest Experience

As the pioneer in providing advanced kitchen technology for the table service industry, QSR Automations® is pleased to introduce the revolutionary ConnectSmart Hostess table management software.

ConnectSmart Hostess ensures restaurants can successfully increase seat utilization and table turns while meeting time commitments and satis-

the real-time, actionable information needed to delight each guest. In addition to monitoring guest status and table turns within the customizable, uniquely intuitive graphical interface, the system's robust feature set includes the ability to assign and view server sections, generate accurate wait times, and efficiently seat walk-in and wait list guests.

As part of QSR's ConnectSmart® Hospitality Automation Solution, operators benefit even further when using ConnectSmart Hostess along with QSR's innovative kitchen management solutions.

With a powerful link to the kitchen and point-of-sale, ConnectSmart Hostess offers the ability to manage and capture the total guest experience — from the moment guests walk in to the time they leave delighted.

And because the system adjusts deeply defined trend data with up-to-the-minute status changes from the kitchen and dining room, ConnectSmart Hostess provides the most accurate wait times that are available.

“We are excited to apply our unique knowledge of the hospitality market to launch a truly powerful solution, ConnectSmart Hostess.”
